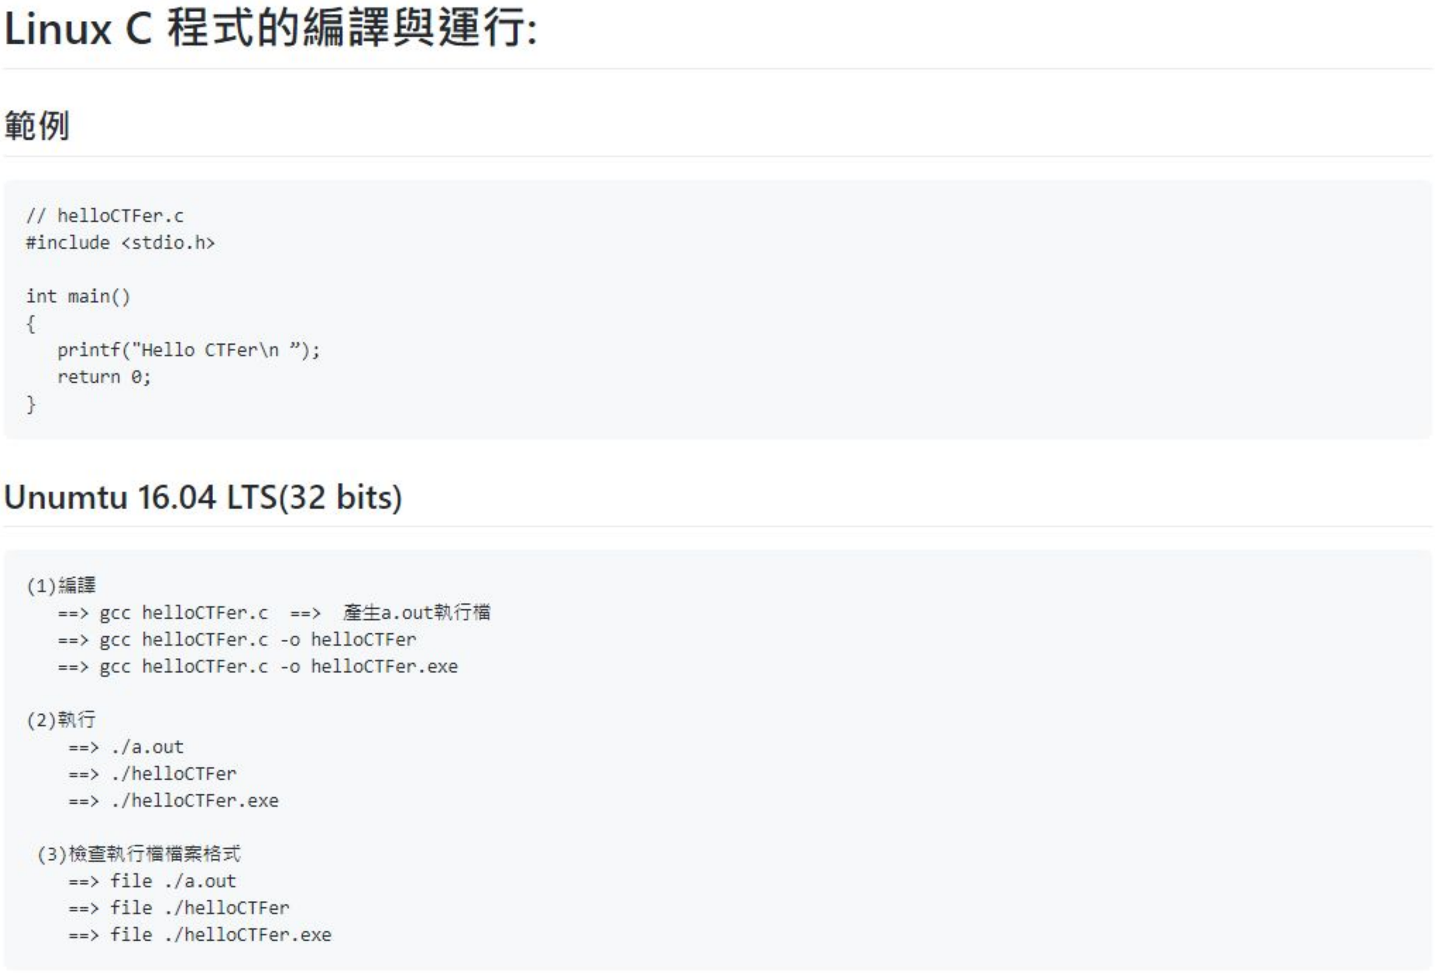
Linux gcc
2021 03 06

https://github.com/MyDearGreatTeacher/2021_1_courses/tree/main/CTF%20%E6%90%B6%E6%97%97%E5%A4%A7%E8%B3%BD%E5%AF%A6%E5%8B%99%E6%8A%80%E8%A1%93



Linux C 程式的編譯與運行:

範例

```
// helloCTFer.c
#include <stdio.h>

int main()
{
   printf("Hello CTFer\n ”);
   return 0;
}
```

Unumtu 16.04 LTS(32 bits)

```
(1)編譯
   ==> gcc helloCTFer.c  ==>  產生a.out執行檔
   ==> gcc helloCTFer.c -o helloCTFer
   ==> gcc helloCTFer.c -o helloCTFer.exe

(2)執行
    ==> ./a.out
    ==> ./helloCTFer
    ==> ./helloCTFer.exe

 (3)檢查執行檔檔案格式
    ==> file ./a.out
    ==> file ./helloCTFer
    ==> file ./helloCTFer.exe
```

```

ELF File magic

```
ELF ==> 可執行與可鏈接格式 （英語：Executable and Linkable Format，縮寫為ELF），常被稱為ELF格式，
        在電腦科學中，是一种用於執行檔、目的檔、共享库和核心转储(core dump)的标准檔案格式。

ELF defines the binary format of executable files used by Linux.
When you invoke an executable, the OS must know how to load the executable into memory properly,
how to resolve dynamic library dependencies and then where to jump into
the loaded executable to start executing it.
The ELF format provides this information. ELF magic is used to identify ELF files
and is merely the very first few bytes of a file:

ELF Magic ==> "Magic numbers" is the name given to constant sequences of bytes (usually)
               at the beginning of files, used to mark those files as
               being of a particular file format.
               They serve a similar purpose to file extensions.

What is ELF Magic?
https://unix.stackexchange.com/questions/153352/what-is-elf-magic
